A New Arrival !

Welcome to the Senlac Veterinary Centre.

A new puppy or kitten means lots to think about- apart from the chaos at home- so we've put together some guides that might be helpful.

Don't hesitate to pop in and chat: our nursing staff are happy to offer advice on:

- **Worming:** important for the health of your pet and your family. We recommend worming at 2,5,8 & 12wks of age, & every 3months thereafter
- **Flea treatment :** effective treatment for young pets
- **Vaccinations & Veterinary Checks**
- **Weight Recording**
- **Diet :** growing bodies need good-quality foods.
- **Microchips & Identity Tags:** it's vital that your pet is safely identified. Microchipping of **dogs** will become compulsory in the future, and is **£10** at the moment.
- **Grooming & claw clipping**
- **Socialisation & training :** best to get this right at the beginning!
- **Settling in at home :** *Adaptil / Feliway* pheromone diffuser
- **Pet Insurance :** we recommend cover for your peace of mind
- **Castration or Spaying :** advice on neutering from 4-5 months old
- **How best to remain sane :** always important

Your young pet needs to feel at ease in the wide world. We're always pleased to see your puppy for a social call; and we can weigh him, make a fuss of him, and show him that the vets is a friendly place to visit.

Bring in a photo for our Pets Picture Wall- we've got a growing collection!
